FEATURES

1 Prepared For Any Performance

Adapting to today's variety of media formats, the CDJ-850 enables playback of MP3, AAC, WAV and AIFF audio files from CDs and USB memory devices. A USB port located on top of the turntable enables users to quickly connect an external storage device such as a hard drive packed with music files, minimizing the need to bring a laptop computer to performances.

The CDJ-850 turntable includes rekordbox™, Pioneer's proprietary music management software that organizes and catalogs a DJ's entire music library. When music files are imported to rekordbox, the software analyzes each file and prepares them for use specifically with the CDJ turntable.

2 Tag List Function

The CDJ-850 comes with our Tag List function, which allows a song to be easily registered with the press of a button while playing or selecting a song, so a future playlist can be created. The order of songs in the Tag List can be changed and the list can be saved as a playlist in rekordbox™.

3 Advanced Auto Beat Loop

The CDJ-850 generates an auto beat loop by pressing the 1, 2, 4, or 8 buttons. Creating perfect loops that allow DJ's more time to blend in transitioning music. The CDJ-850 has 10 beat loop options providing DJ's with a greater level of performance creativity.

4 Fully Assignable USB MIDI Functionality

MIDI compatible DJing software can be used via a USB connection to a PC. The CDJ-850 is also compatible with USB HID. By connecting via USB HID, the more complex operations of DJing software can be achieved without using a control disc. It can be used as a PC's audio interface.

5 Rich Display For Quick And Easy Music Selection

Our GUI, which makes music file information (such as the title, artist and BPM) easy to grasp, and the rotary selector are combined for quick and easy music selection. The WAVE display smoothes out DJ play because it allows the DJ to grasp the flow and dynamics of the whole song.
